THE GEOID

The geoid is the equipotential surface of the earth's attraction and rotation which, on the average, coincides with mean sea level in the open ocean.

$H =$ Height Above
Sea Level

$N =$ Geoid Height

$h = H + N =$
Ellipsoidal Height

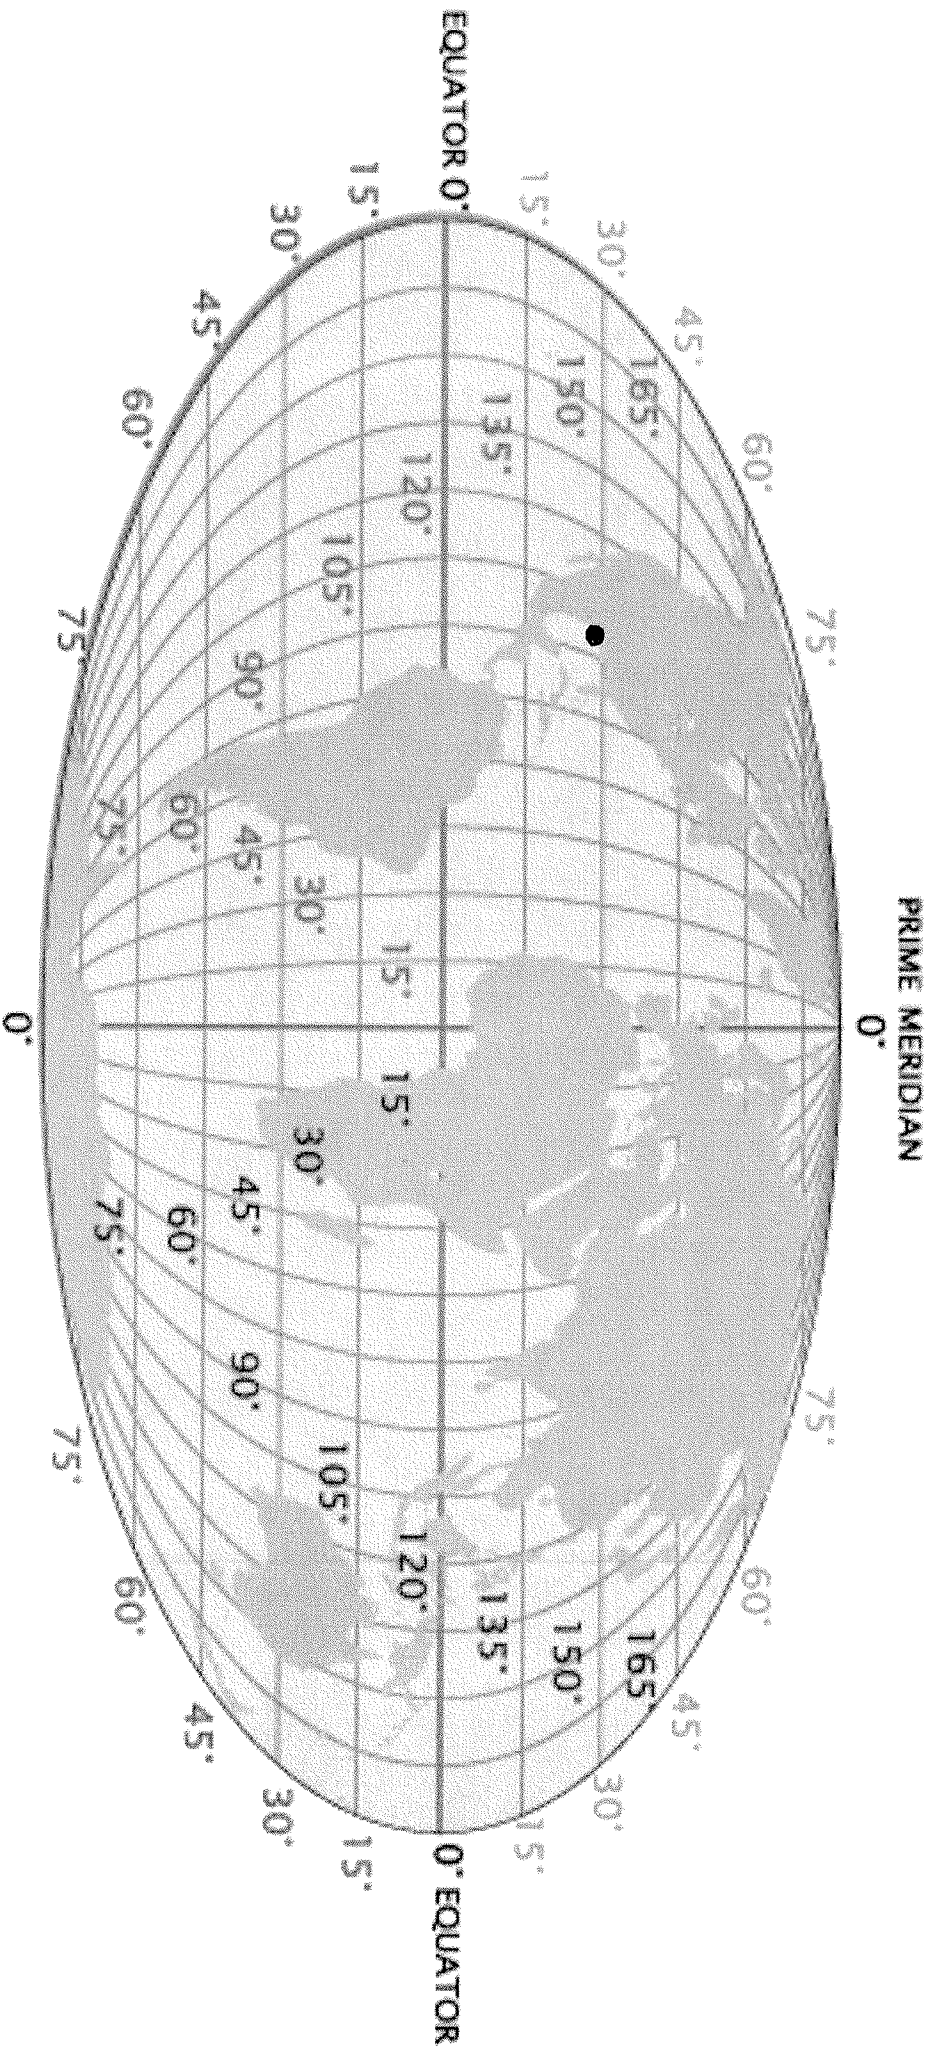

THE ELLIPSOID

a = Semi major axis

b = Semi minor axis

f = $\frac{a-b}{a}$ = Flattening

APPENDIX C.--CONSTANTS FOR THE LAMBERT PROJECTION
BY THE POLYNOMIAL COEFFICIENT METHOD

Constants	Description
Bs =	Southern standard parallel
Bn =	Northern standard parallel
Bb =	Latitude of grid origin
Lo =	Longitude of the true and grid origin, the "central meridian"
Nb =	Northing value at grid origin "Bb"
Eo =	Easting value at the origin "Lo"
Bo =	Latitude of the true projection origin, the "central parallel"
SinBo =	Sine of Bo
Rb =	Mapping radius at Bb
Ro =	Mapping radius at Bo
K =	Mapping radius at the equator
No =	Northing value at the true projection origin "Bo"
ko =	Central parallel grid scale factor
Mo =	Scaled radius of curvature in the meridian at "Bo"
ro =	Geometric mean radius of curvature at Bo scaled to the grid

Bs, Bn, Bb, and Lo in degrees: minutes
 Bo in decimal degrees
 Linear units in meters

(See page 44 for equivalent notation of defining and derived constants used in the figure below.)

PARAMETERS OF A LAMBERT PROJECTION

- 58.20.220 Real estate transactions -- Exemption.
- 58.20.901 Severability -- 1989 c 54.

58.20.110
Definitions.

Unless the context clearly requires otherwise, the definitions in this section apply throughout RCW

58.20.110 through 58.20.220 and 58.20.901:

- (1) "Committee" means the interagency federal geodetic control committee or its successor;
- (2) "GRS 80" means the geodetic reference system of 1980 as adopted in 1979 by the international union of geodesy and geophysics defined on an equipotential ellipsoid;
- (3) "National geodetic survey" means the national ocean service's national geodetic survey of the national oceanic and atmospheric administration, United States department of commerce, or its successor;
- (4) "Washington coordinate system of 1927" means the system of plane coordinates in effect under this chapter until July 1, 1990, which is based on the North American datum of 1927 as determined by the national geodetic survey of the United States department of commerce;
- (5) "Washington coordinate system of 1983" means the system of plane coordinates under this chapter based on the North American datum of 1983 as determined by the national geodetic survey of the United States department of commerce.

[1989 c 54 § 9.]

58.20.120
System designation — Permitted uses.

Until July 1, 1990, the Washington coordinate system of 1927, or its successor, the Washington coordinate system of 1983, may be used in Washington for expressing positions or locations of points on the surface of the earth. On and after that date, the Washington coordinate system of 1983 shall be the designated coordinate system in Washington. The Washington coordinate system of 1927 may be used only for purposes of reference after June 30, 1990.

[1989 c 54 § 10.]

58.20.130
Plane coordinates adopted — Zones.

The system of plane coordinates which has been established by the national geodetic survey for defining and stating the positions or locations of points on the surface of the earth within the state of Washington is designated as the "Washington coordinate system of 1983."

For the purposes of this system the state is divided into a "north zone" and a "south zone."

The area now included in the following counties shall constitute the north zone: Chelan, Clallam, Douglas, Ferry, Island, Jefferson, King, Kitsap, Lincoln, Okanogan, Pend Oreille, San Juan, Skagit, Snohomish, Spokane, Stevens, Whatcom, and that part of Grant lying north of parallel 47° 30' north

latitude.

The area now included in the following counties shall constitute the south zone: Adams, Asotin, Benton, Clark, Columbia, Cowlitz, Franklin, Garfield, that part of Grant lying south of parallel 47° 30' north latitude, Grays Harbor, Kittitas, Klickitat, Lewis, Mason, Pacific, Pierce, Skamania, Thurston, Wahkiakum, Walla Walla, Whitman and Yakima.

[1989 c 54 § 11.]

58.20.140 **Designation of system — Zones.**

As established for use in the north zone, the Washington coordinate system of 1983 shall be named, and in any land description in which it is used it shall be designated, the "Washington coordinate system of 1983, north zone."

As established for use in the south zone, the Washington coordinate system of 1983 shall be named, and in any land description in which it is used it shall be designated, the "Washington coordinate system of 1983, south zone."

[1989 c 54 § 12.]

58.20.150 **Designation of coordinates — "N" and "E."**

"N" and "E" shall be used in labeling coordinates of a point on the earth's surface and in expressing the position or location of such point relative to the origin of the appropriate zone of this system, expressed in meters and decimals of a meter. These coordinates shall be made to depend upon and conform to the coordinates, on the Washington coordinate system of 1983, of the horizontal control stations of the national geodetic survey within the state of Washington, as those coordinates have been determined, accepted, or adjusted by the survey.

[1989 c 54 § 13.]

58.20.160 **Tract in both zones — Description.**

When any tract of land to be defined by a single description extends from one into the other of the coordinate zones under RCW

58.20.130, the positions of all points on its boundaries may be referred to either of the zones, the zone which is used being specifically named in the description.

[1989 c 54 § 14.]

58.20.170 **Zones — Technical definitions.**

For purposes of more precisely defining the Washington coordinate system of 1983, the following definition by the national geodetic survey is adopted:

The Washington coordinate system of 1983, north zone, is a Lambert conformal conic projection of the GRS 80 spheroid, having standard parallels at north latitudes 47° 30' and 48° 44', along which parallels the scale shall be exact. The origin of coordinates is at the intersection of the meridian 120° 50' west of Greenwich and the parallel 47° 00' north latitude. This origin is given the coordinates: E = 500,000 meters and N = 0 meters.

The Washington coordinate system of 1983, south zone, is a Lambert conformal conic projection of the GRS 80 spheroid, having standard parallels at north latitudes 45° 50' and 47° 20', along which parallels the scale shall be exact. The origin of coordinates is at the intersection of the meridian 120° 30' west of Greenwich and the parallel 45° 20' north latitude. This origin is given the coordinates: E = 500,000 meters and N = 0 meters.

[1989 c 54 § 15.]

58.20.180 **Recording coordinates — Control stations.**

Coordinates based on the Washington coordinate system of 1983, purporting to define the position of a point on a land boundary, may be presented to be recorded in any public land records or deed records if the survey method used for the determination of these coordinates is established in conformity with standards and specifications prescribed by the interagency federal geodetic control committee, or its successor. These surveys shall be connected to monumented control stations that are adjusted to and published in the national network of geodetic control by the national geodetic survey and such connected horizontal control stations shall be described in the land or deed record. Standards and specifications of the committee in force on the date of the survey shall apply. In all instances where reference has been made to such coordinates in land surveys or deeds, the scale and sea level factors shall be stated for the survey lines used in computing ground distances and areas.

The position of the Washington coordinate system of 1983 shall be marked on the ground by horizontal geodetic control stations which have been established in conformity with the survey standards adopted by the committee and whose geodetic positions have been rigorously adjusted on the North American datum of 1983, and whose coordinates have been computed and published on the system defined in RCW

58.20.110 through 58.20.220 and 58.20.901. Any such control station may be used to establish a survey connection with the Washington coordinate system of 1983.

[1989 c 54 § 16.]

58.20.190
Conversion of coordinates — Metric.

Any conversion of coordinates between the meter and the United States survey foot shall be based upon the length of the meter being equal to exactly 39.37 inches.

[1989 c 54 § 17.]

58.20.200
Term — Limited use.

The use of the term "Washington coordinate system of 1983" on any map, report of survey, or other document, shall be limited to coordinates based on the Washington coordinate system of 1983 as defined in this chapter.

[1989 c 54 § 18.]

58.20.210
United States survey prevails — Conflict.

Whenever coordinates based on the Washington coordinate system of 1983 are used to describe any tract of land which in the same document is also described by reference to any subdivision, line or corner of the United States public land surveys, the description by coordinates shall be construed as supplemental to the basic description of such subdivision, line, or corner contained in the official plats and field notes filed of record, and in the event of any conflict the description by reference to the subdivision, line, or corner of the United States public land surveys shall prevail over the description by coordinates.

[1989 c 54 § 19.]

58.20.220
Real estate transactions — Exemption.

Nothing contained in this chapter shall require any purchaser or mortgagee to rely on a description, any part of which depends exclusively upon the Washington coordinate system of 1927 or 1983.

[1989 c 54 § 20.]

58.20.901
Severability — 1989 c 54.

If any provision of this act or its application to any person or circumstance is held invalid, the remainder of the act or the application of the provision to other persons or circumstances is not affected.

[1989 c 54 § 21.]

Local geodetic control survey standards.

The following standards shall apply to local geodetic control surveys:

The datum for the horizontal control network in Washington shall be NAD83 as officially adjusted and published by the National Geodetic Survey of the United States Department of Commerce or as established in accordance with chapter [58.20](#) RCW. The datum tag and coordinate epoch date (if pertinent) shall be reported on all documents prepared, which show local geodetic control; e.g., NAD83 (1991), NAD83 (CORS) (2002.00), NAD83 (NSRS) (2005.50) and other future [standards].

[Statutory Authority: Chapter [58.24](#) RCW. 05-13-104, § 332-130-060, filed 6/17/05, effective 7/18/05. Statutory Authority: RCW [58.24.040](#)(1). 91-19-013 (Order 581), § 332-130-060, filed 9/9/91, effective 10/10/91; 89-11-028 (Order 561), § 332-130-060, filed 5/11/89; Order 275, § 332-130-060, filed 5/2/77.]

Notes:

Reviser's note: RCW [34.05.395](#) requires the use of underlining and deletion marks to indicate amendments to existing rules, and deems ineffectual changes not filed by the agency in this manner. The bracketed material in the above section does not appear to conform to the statutory requirement.

Land Survey Services

Introduction

- [Survey Control](#)
- [Survey Control \(mobile\)](#)
- [Survey Control Map](#)
- [GPS Base Station Data](#)
- [Plat Map Forms](#)

The Land Surveying division, a part of the Civic Services Department, produces and maintains specialized maps and data. Survey staff provide the following services:

- Land surveying and mapping services for city staff in support of capital improvement projects, resource management, accident and crime scene investigations and land use actions.
- Preservation of historical survey monuments required to accurately locate property boundaries, easements and public rights of way.
- Creation and maintenance of geodetic control networks for use by survey and mapping professionals.

If you need more generalized mapping services, the Geographic Information Systems (GIS) Services division can help you.
